Reload to refresh your session. The company was founded in 1900, but didn't begin producing cars until 1914. Up until then, they were a parts supplier to Detroitbased car makers. They have an extensive range of performance vehicles, as well as lowerpriced variants of Chryslerbadged models. They are manufactured under the Ram brand, which is wellknown for models like the 2500, the 3500 and the 5500. Dodge introduced a line called "Adult Toys" in the 1970s to help boost their truck sales, which included various customized versions of popular models. The purposebuilt Ramcharger was manufactured in 1974 and features a powerful V8 engine. This model was redesigned in 1994 and followed this up with the Durango model in 1997. Dodge vehicles are sold throughout the world, including Europe, Canada and Brazil.

Chances are even less likely when working with a private seller. Or, if you have, it probably felt like any other upsell. While a lot of drivers search for the best looking truck wheels, what looks good isn't always safest.

To help you find a good balance between form and function, here's a list of seven of the best wheels for trucks in 2020. The designs affect viewers' depth perception, giving the wheels a sleek and slim look despite their sturdiness. Of course, looks aren't everything. These wheels also come in a variety of sizes for all kinds of trucks and are rated for up to 3200 pounds. RBP offers a one-year warranty to back up their claims. The eight-spoke design comes in your choice of size, offset, and bolt patterns, with a classic chrome finish. Warranties on finishes are rare, so if looks are the top priority for you, the Moto Metal is the model to buy. What better way to celebrate than buying wheels from the classic brand, American Racing. For that reason, their wheels are built tough. Whether you're a racer yourself, an avid hiker, or a typical city driver, the AR172 Baja will get your ride up to speed. If you want your truck to stand out, popular truck rims are guaranteed to make a big statement. Fuel Cleaver D574 wheels are popularly known as some of the best rims for trucks, so you can think of them as a two-for-one! As their name suggests, these wheels are designed for offroad use and come in two intimidating black finishes one with "dimples," and the other milled. While this rating limits the Crusher's versatility, it's an excellent tire option for smaller vehicles. You won't be betrayed by Arkon's OffRoad Caesar wheels, one of the best offroad truck wheel models. These super functional wheels don't discount looks. Detailing on the Caesar's many spokes and exposed lugnuts add to its visual appeal. Still, aren't you wondering about the most popular brand of all? It's among the very top sellers in many stores and won't let you down. That's a quality guarantee—brands don't make promises like that if they're not confident in their product, and products don't sell like this if the promises don't ring true!

Buyers have their choice of three different finishes black, machined black, or gray. Considering that custom wheel upgrades cost a pretty penny and aren't guaranteed to look good, these stylish options are an excellent deal. As Americans get back on the road, we have to make sure that our vehicles are in working order. Your next steps are to research car and truck care tips, travel information, and local news to keep up to date and stay safe. Keep browsing our site for more important news in an easy-to-read form, and we'll keep delivering all the stories you need to know. When you get to that point of car ownership, it can be a tough decision. You want to make that decision well in advance. When you get to that point of car ownership, it can be a tough decision. You don't want to be put in a position where you're forced to buy new in an emergency because you decided to run your car into the ground. Take the time now to consider if it's the right time to sell or replace your car. Read on to find out. It's usually much less expensive to repair your car vs. In other words, you

know exactly what you're dealing with. You know the history of your car and you should be able to predict when your next repairs are. You also don't have to spend energy on selling your car. You fix up quickly and you're back on the road again. Your car is likely to come with certain warranties, too. Here are some tips to consider. How old is it? You'll also want to know the average lifespan for your make and model. Some cars are known for hitting the wall at 120,000 miles and others have a reputation for lasting 200,000 miles. Car owners who have been diligent in keeping up with regular maintenance can be confident that their car will last longer. They'll know when the belts need to be changed, when the brake pads should be replaced and when it's time to change the oil.

Delays in getting the oil changed, waiting until the engine light comes on to do something on your car, or ignoring basic care will lead to major repairs. Let this be a lesson in car care. You'll want to weigh a few things before deciding when to buy a new car or repair it. How much does that repair cost. Now, look at the Blue Book Value of the car if you were to trade it in or sell it privately. It's not always that simple. In some cases, you'll have to look at how many more repairs will have to be done. If there are more expensive repairs and maintenance that needs to happen, then you should replace it. You just need to get to work. Some repairs are simple enough to do on your own. Others will require the expertise of a mechanic. Now, where do you go to get it repaired. If there are some repairs that you can't do on your own, you need to find a mechanic that you can trust. A company like MTech Car Servicing would be a good fit. Reviews will tell you a lot about how different companies work. You'll have to find financing for your car if you don't have money set aside for a purchase. By using these tips presented here, you can easily evaluate when to buy a new car or when to repair it. Check out these tips for fuel system maintenance. This is always an exciting time of year for truck owners. The automotive companies are proud to show off everything they've been working on for the past year, and now we all finally get to test the new merchandise for ourselves! As advances in technology continue, and designers strive to give consumers what they want, each year the products that roll off the line keep getting better and better. This beauty has everything you could possibly need when it comes time to hit the trail. For the motor you can choose between a 5.7liter Hemi V8 or a V6 with eTorque. This production pickup offers performance that is hard to contain on paved roads. And the suspension has been upgraded to Fox Racing shocks with impressive aluminum control arms.

The hardware speaks for itself, with an available V8 5.7liter 381 hp power plant, and a towing capacity of 10,200 pounds. Each of the new trucks on this list is an impressive example of modern design and engineering. Which is great news for truck lovers. In fact, the toughest decision you'll have to make is picking just one. Please upgrade your browser to improve your experience. Over the years, The Dodge Ram established itself as a capable compromise between a rugged work truck and a comfortable, civilized personal vehicle. The basic formula used here is similar to ones used by close competitors. No matter which generation, you will always get a sturdy suspension, cab options that can accommodate two to five adults, a large cargo area and either rear wheel or all wheel drive option. Everything else was changing to keep up with current trends and market demands of the time. Essentially, it was the final iteration of the D series, a truck whose origins dated back in the 60s. And this was its biggest downfall, despite the ruggedness and overall quality. The body was boxy and outdated, the interior equipped was scarce, while engines, both Slant straight six units and LA V8 ones, were almost a decade old. When compared to Ford and GM counterparts, the Ram was outgunned in all aspects. This reflected on sales figures, because the Ram wasn't a popular option among buyers in the first several years of production. Although both Ford and GM offered diesel engines in their fullsize pickup trucks for years, the Cummins unit used for Ram trucks was in a different league. With dependable reliability, simple design and plenty of torque, this 5.9 liter straight six was a game changer. Over night, Ram with Cummins engine became the favorite choice among contractors and farmers. This combined with updated comfort and safety features, such as ABS and fuel injection, helped increase sales volumes during final production years.

At the turn of the decade, it was clear that Ram had a good market potential. It was up to Dodge to make the best of it. Moving away from the boring utilitarian look, the new Ram added some interesting visual features. According to Dodge, the inspiration for the new look came from the 50s Power Ram Wagon. The raised hood line, lowered fenders and placement of the headlights all give away the similarity. Standard options were Magnum V6 or bigger V8 engines. With revised cam profile, modified valve train and addition of sequential electronic fuel injection, these engines delivered more power and better low down torque. Being such a hit in the previous generation, the Cummins engine was the only logical choice for a diesel unit. It remained unchanged until 1998, when it got the modern 24 valve head. Rounding up the engine options, there was a massive V10 unit, being the most powerful gasoline engine available at that time. Engines were available either with a fourspeed automatic or a fivespeed manual transmission, Other features included driver and passenger airbags, rear abs as standard and optional power takeoff. Things like comfortable and adjustable front seat, power locks and mirrors, cruise control and air conditioning gave this truck a civilized, carlike manners. It didn't take long for buyers to recognize these upsides, and sales quadrupled in the first year alone, when 400.000 new Rams left the factory. This production pace continued for the next several years, only to decline around 2001. Design wise, this truck was an evolution of its predecessor, keeping features such as crosshair grille and truck style front end. The body was bigger and more massive, but thanks to various design tricks, it appeared sleeker and in touch with time. Features such as leather seats, power adjusting mirrors and automatic air conditioning stated that this was more than an ordinary work truck. And so did the engines.

Besides standard V6 and V8 Magnum units, buyers could get a special SRT version equipped with a V10 engine from a Dodge Viper. As for the diesel engine, the trusted Cummins unit received several updates during the production run of the third gen. Most noticeable ones are the introduction of the common rail injection system in 2003, while in 2007 a newly designed 6.7 liter unit replaced the aging 5.9 liter engine. This updated look followed the new design outlines caused by a ChryslerDaimler merger. However, buyers didn't seem to like the new appearance. As the sales figures declined, Dodge was forced to take action and speed up the development of the next generation. The basis for the design was the early third gen trucks, and both crosshair grille and sloping wheel arches were still there. However, the new truck had an aggressive appearance and more prominent body lines. And with optional chrome details, it was stylish and flashy. Magnum V6 and V8 engines gave way to more modern PowerTech and Pentastar units, which offered better driving characteristics and fuel economy. And there was, two HEMI V8 engines and a 6.7 liter Cummins diesel, who all received various small updates over the years. The biggest news was the introduction of the smaller V6 diesel engine, called EcoDiesel. This engine aims at customers who wanted a fuel efficient truck but didn't need the power and towing capabilities of a heavy duty Cummins engines. All engines come with either six or eight speed automatic or six speed manuals. Most fullsize pickup trucks use leaf springs in the back. It is simple and durable, but it has a negative impact on the ride quality. Fourth gen Ram uses a multilink rear suspension with coil springs that absorbs rough pavement rather than deflecting it. With this, the Ram rides more like an SUV than a traditional pickup.

This was also the only truck to offer an active leveling air suspension on all four corners, features an access setting that drops ride height by 2 inches. It brings in a more sophisticated and bold design, while still keeping that traditional tough and aggressive appearance, which is important in this segment. Most noticeably, the signature grille and headlights layout gave way to a sleeker and more elegant arrangement. Also, headlights are now available as standard halogen units and with integrated adaptive LEDs. The base option is a V6 Pentastar engine, followed with two HEMI V8 units and a well known 6.7 liter Cummins diesel. Both V6 and smaller HEM V8 are available in combination with "eTorque", a mild hybrid system that improves torque and fuel economy. It is worth mentioning that Cummins unit is now delivering 1000 lbft of torque, making Ram the first

truck to break this barrier. Dodge announced that later during production, a redesigned V6 EcoDiesel will be available. Abundance of storage compartments helps keep the interior clean. This helped increase structural rigidity and reduce overall weight. With all this, the new Ram keeps up with all current trends in touch while keeping tough workman personality.
