Privacy, Cookies and AdChoice Norton Secured powered by Verisign. Seems to work great. I ran it on low power 15 amps and ran a couple beads with it plugged into my apartment power outlet was welding out on the fire escape. One thing thats a little annoying is that there is a three position switch for low power Off and High power. Off is the center position of the switch and its a little hard to be sure if youve turned the thing off or if you switched it to high power. Thats a little dangerous, but I just unplug it too if Im going to be messing around. I think its great for the price, Im just going to be doing hobby stuff making robots, etc.The case is thicker steal, the leads are long, and this thing works. Bought this time and really happy I did not cheap out and get something crappy. I was torn between this and Hobart. Millers are perfect but out of my price for a 110 welder. This thing welds excellent for 110. No problems and very happy.Prior to purchasing this welder my only experience with arc welding was a brief introduction to stick welding I got as part of a Junior High School shop class back in the late 1950s. I still have vivid memories of how hard it was to try to start an arc and keep it going while also having to flip the helmet down at the same time. Those memories were enough to keep me from even considering the purchase of an arc welder until the morning I got the wild idea to order this welder and an auto darkening helmet. WOW, what a difference using this is from memories of trying to learn to stick.

This machine was bad with flux, pretty much worthless but am very surprised how nice it runs with gas. Make sure your metal is clean. Its been welding fairly thick sheet metal like a champ and never triggered the thermal protection light even welding foot long beads at a time. Its not on a dedicated circuit,just a 20a that shop lights are also running on.Very good price.I find the valves on the regulator and torch handle to be very loose. The regulator isnt as much of a problem, because once you set the pressure, the valves are mostly out of the way and they stay the way you leave them. However, the valves on the torch handle are prone to being bumped or brushed with a glove or a hose while in use, and sometimes I feel the valves turn on their own. Keeping them set is tough, and I wish there ware a way to stiffen them a little to prevent them from wandering. I need to take a closer look at the mechanism to see if theres a way to set the tension. We have the parts you need to repair your tractor the right parts.
