The Optura 60 combines extraordinary 2.2 megapixel performance with advanced controls for your digital photography. The camcorder also lets you take as much or as little control over your video as you want with a wide range of automatic settings. With these advanced controls and automatic settings along with an advanced, 9 point auto intelligent autofocus there are no limits to your creativity. You always get the shot you want. Not only that, the Optura 60 makes it easy for you to share your great shots.

The camcorder connects with your computer effortlessly, letting you manage, stream and email your memories for all to enjoy. Features of the Canon Optura 60 Camcorder and Digital Camera in One You have them both without compromising the quality of your video or digital photography. That's because Canon's exclusive DIGIC DV signal processing circuit processes video and still images differently. The two signals have different color requirements and DIGIC DV technology processes the two signals accordingly, giving you uncompromised results. That means video images that are maximized for viewing on TV, and digital photographs that look brilliant on computer displays or as

prints. DIGIC DV is just one of Canons DV Photo Plus technologies that help to unleash the performance potential of the Optura 60. Unsurpassed Optical Quality A part of every Canon product are genuine Canon optics, and the Optura 60 is no exception. You get the same clarity, brilliance and vivid color that advanced amateurs and professionals have come to expect from the Genuine Canon Optics in 35mm film cameras and broadcast TV cameras. Genuine Canon Optics is just one of the DV Photo Plus technologies that make the Optura 60 such a standout performer. The Optura 60 comes with a 14x optical zoom which is enhanced by the camcorders 280x digital zoom, giving you an impressive zoom range found on more expensive cameras. 2.2 Megapixel Performance One of the reasons the Optura 60 delivers stunningly vivid and sharp video and still up to 1632 x 1224 images is its 2.2 megapixel CCD. Its one of the DV Photo Plus technologies that ensure outstanding results. In the Optura 60, this performance is combined with Canons advanced RGB primary color filter. Other camcorders process color using a standard CMYG filter, resulting in duller colors. Canons RGB filter separates light into its red, green and blue components, resulting in professionalquality images with naturallooking tones and vivid hues. Together, the 2.

2 megapixel CCD and RGB color filter deliver uncompromisingly brilliant results. One Touch Photo Downloading and Printing Print and Share, one of the powerful Canon DV Photo Plus technologies, makes possible downloading and printing in a snap. Print and Share does just that with the touch of a single button, you can print digital photographs from your Optura camcorder, directly to a Canon CPseries photo printer, or Canon Bubble Jet direct printer or any Pictbridgecompatible printer. Simply connect your Optura camcorder to your printer using the supplied USB cable USB 2.0 full speed. Wait for the button to light up, press it, and youve got a print to share with family and friends. With Print and Share, your Optura has all the controls you need for reviewing and rotating images, cropping, or selecting borderless prints. And, because your Optura tags each photo with Exif 2.2 information, poor lighting and other mistakes are corrected in the printer automatically. You can

also share your photos by quickly and easily downloading them to your computer with the same touch of a button for archiving and emailing. Your Optura also supports Picture Transfer Protocol PTP. That means your computer can access your camcorder as if it were an external card reader without installing additional software. minimum system requirements Windows XP, or Mac OS X, version 10.1 With the Optura 60, its easy to share the memories. More Control for Perfect Photos Not only does the Opturas DIGIC DV technology help you take great photos from your camcorder, a wide array of advanced photo controls ensure beautiful results. Controls include Auto exposure bracketing gives you 3 shots automatically one normal, one overexposed, and one underexposed. 3 metering modes for the advanced photographer shooting under a variety of lighting conditions Evaluative, Centerweighted Average, Spot. 4 image settings to match your subject vivid, neutral, low sharpening, soft skin detail.

Built-in flash for low light and interior photography. Continuous shooting mode for sports, action, or kids just having fun 3 frames per second 1632 x 1224, 5 frames per second 1280 x 960. Photo review button so you know if you got the shot or not. A Shooting Mode for Every Situation You can get the help you need for the perfect video or photo. The Optura 60 gives you different settings that automatically give you the best exposure settings for different conditions, or gives you control so you get the exact image you're after. Shooting modes include 6 new scene modes foliage, fireworks, beach, snow, sunset and spotlight. Each adjusts your camcorder's settings to compensate for different lighting conditions and different subjects. And, when you want to be in control of depth of field, the Optura 60 gives you an AV aperture priority setting so you can select the aperture of the lens. And, the TV shutter priority setting lets you select a faster shutter speed so you get sharp, crisp images of fast-moving action. Low light levels won't stop you either. With the Optura's night mode, the sensitivity of the camera's CCD is automatically boosted and the shutter speed is lowered to give you better performance in dim conditions. And for when things get really dark, you've got the Optura 60's mini video light to light up the night. From Camera to Computer with Ease Show and share your memories that much faster by storing your digital photographs on the MultiMediaCard connected to

your cameras builtin memory card slot. Then, transfer the images to your computer for archiving, editing and printing. In the same card slot, you can also use an SD Secure Digital memory card. You can also record motion JPEG movie clips to your memory cards, transfer them to your computer, and email or stream them over the web. When using an SD memory card, you can record for the full length of the card. Thats a 60 minute movie with a 512MB card.

With MultiMediaCards, movie clips are limited to 10 seconds in 320 X 240 resolution, and 30 seconds in 160 X 120. Say Goodbye to Unsteady, Out of Focus Images Image stabilization lets you capture the shot, whether youre taping or photographing sports, fun and games at your childs birthday party, or shooting at a long focal length. Your shot will also be in focus even if your subject isnt in the center of the frame because there are 9 autofocus points to lock on to your subject. Give Your Shots the Widescreen Look With the Opturas high resolution, 169 widescreen mode a feature typically found on more expensive camera systems, you can have it whenever you need it. And in widescreen mode, the LCD viewscreen gives you a letterboxstyle display for accurate composition. Kevin 5.0 out of 5 stars After receiving the unit I had no problem getting set up and was snapping pictures and making videos in no time. One feature that sets this camcorder apart from others is its ability to take high quality 2 megapixel still shots, recording them to a SecureDigital card. From my previous experience with Canon cameras it seems that they really know what they are doing in terms of digital photography and the Optura 60 continues to amaze.

The camera has produced still shots that are equal or better in quality to my Olympus C740UZ.

The video quality is excellent and it is very easy to copy your still shots and videos using USB 2.0 OR Firewire to your Windows XP PC. Also the Optura 60 has an Optical Image Stabilizer OIS which is superior to Electronic Image Stabilization EIS in that it does not degrade image quality as much as EIS. However OIS does not make the picture as steady as some EIS based ones. The audio seems fine some have complained that motor noise surfaces in quiet conditions. The set and func button are badly placed as you can't see them when the LCD is open. Top Loading cassette system is always a winner compared to bottom loading for when you use a tripod. The camcorder also does Analog to Digital pass through. So you can use this to convert your VHS stuff to MiniDV or directly to a computer. Works well with Mac; iMovie controls the camcorder just fine and importing video was easy. The accessory hot shoe is also an added bonus for expanding external mics, video lamps and the camcorder can communicate with these addons. Overall, excellent value in a market where each new model year of camcorders seems to be reducing feature and functionality. AND don't rely on the Canon warranty to fix it. They will try to blame it on something the consumer did. I got the cassette eject problem after less than two months. After much wrangling they finally admitted it was the capstan motor. Maybe the factory service center is accumulating statistics on types of repairs and it makes Canon look better if the problem can be attributed to something the consumer did, rather than their own faulty workmanship. I've had the camera back for a week and so far it's ok. I counted nine grains of sand in the compartment where the battery goes and two grains on the lens cap. What do you expect with normal beach use. If these things are so extremely delicate Canon should not be marketing them to consumers. I've been videoing at the beach since 1991 with a Sony and I've never had any sand problems.

I take good care of my electronic equipment, but Canon made me feel like some halfassed teenager, instead of the fiftysomething grandmother I am. I think it was very underhanded the way they tried to make out I was at fault. I spent hours on the phone with them on my nickel. This experience has soured me on Canon. I will NEVER buy another Canon product. Page Count 4 Affordable Performance Around the world, the name Canon means optical excellence, advanced And Canon digital. 2 files to download for Canon F766S. 2 Megapixel performance with advanced controls for your digital photography. To make capturing photos even easier, the 2005 Optura series features, for the first time ever, scene modes that are easily selected from the side mounted control wheel. Userfriendly modes include beach, sunset, snow, foliage, fireworks, and spotlight to adapt to most shooting situations for both photo and video. Users can also be creative with manual features such as aperture and shutter priority modes, manual audio level recording and a large manual focusing ring on the front of the lens. Exclusive features offered on the Optura 60 camcorder include a USB 2.0 highspeed terminal for fast and easy transfer of fullquality digital video to a computer and Advanced Accessory Shoe, which allows certain Canon accessories to attach and be powered directly from the camera without wires or additional power. The Optura 50 and Optura 60 both feature a Night Mode, which allows users to capture video under low light conditions. For more advanced low light recording, the Optura 60 camcorder also offers a builtin video light, which enables users to keep shooting even in the dark. Simply slide Canons VFL1 Video Flash Light, DM50 Directional Stereo Microphone or VL3 Video Light into the accessory shoe; the camcorder will automatically provide power and connections. No

external power or cables are required. It selects the ideal shutter speed and sensitivity combination to help brighten up the scene, without sacrificing color. To experience the ultimate in lowlight recording, simply turn on the Mini Video Light. RGB Primary Color Filter separates the light passing through the lens into individual red, green, and blue color components, the same color filtration used in professional 3 CCD camcorders. As a result, the Optura 60 deliver richer, more vibrant, and more accurate color reproduction than models using a conventional complementary color filter.

Optical Image Stabilizer The Optura 60 utilizes the finest method of image stabilization available optical. Canons lens design includes a dedicated optical element which shifts up and down and side to side based on motion, so your video and photos always look smooth, steady, and natural. Unlike electronic image stabilizers, there is no loss in image quality. **High Resolution 169 Widescreen Video Record** highresolution video in the 169 format for playback on widescreen TVs. Unlike systems which simply record a vertically stretched picture, the Optura 60 uses the full width of the CCD, filling the entire screen with crisp, highquality images. The LCD screen shows the image in letterbox style, so you know exactly how your image will appear on TV. **High Resolution 2.2 Megapixel CCD** The camcorders feature advanced image processing, for capturing stunning, 2.0 Megapixel 1632 x 1224 pixels photos onto the included memory card. **SD Memory Card and MultiMediaCard Easily** transfer images to your PC directly from the camcorder using USB and IEEE1394. Produce effects not possible with just a cassette using the Card Mix Effects. Choose one of the sample images provided on the supplied SD Memory Card such as picture frames, backgrounds and animations and combine it with the live video recording. A 16MB MultiMediaCard is supplied with the camcorder. **VIC** Canon camcorders feature an exclusive connection circuit, called VIC. VIC is a virtual powerhouse. Traditionally, multiple chips were needed to perform the camcorders input and output functions. However VIC manages it all with one single chip. The result is seamless connectivity whether you are connecting to a computer, TV, or VCR. Or connect your camcorder to your computer and with a single press of a button you can share photos with friends and family. **9 Point AiAF Auto Intelligent Auto Focus With Selectable Focusing Points.** Sometimes, the subject we want to photograph is not in the center of the frame.
