Its very simple just type the brand name and the type of product in the search bar and you can instantly view the manual of your choice online for free. ManualSearcher.com If you continue to use this site we will assume that you are happy with it. Read more Ok. It has a clean, simple, and solid design that should appeal to most camera buyers. But in the world of cameras, beauty is only bodycasing deep and its what happens inside the camera that really counts. Unfortunately, the images that are captured and processed inside the DMCFX55 fall a little short of the competition. That means that while it does include a lot of nice features, photographers who value image quality first should look elsewhere for a sleek, shiny pocket camera. The 3inch 230,000pixel LCD screen leaves little room for buttons, but Panasonic includes a very nice, large joystick to access the mostly menu-driven controls. The joystick also provides quick access to exposure compensation, flash, the self-timer, and image review. Plus, pressing the joystick opens the menu. This makes operating the camera easy in that you dont need to learn the locations of buttons, but menu-driven controls can also be slower than the alternative. In the case of the DMCFX55, this means that it takes seven button presses to change the ISO and get back to shooting. To Panasonics credit, it did place white balance at the top of the menu, so that it can be changed quicker. I guess Panasonic thinks that users will want to change that more frequently than ISO. While the large LCD looks impressive, it forces you to grip the camera along the narrow righthand edge, especially since the indented portion on the front of the camera is very close to the edge as well. I found this uncomfortable. Panasonic would have been better off sticking with the design of the front of last years DMCFX50, which had a nook closer to the middle of the front of the camera.<http://www.maciejmarkiewicz.pl/uploaded/canon-pixma-640-manual.xml>

Of course, holding the camera with two hands, something I always suggest to keep the camera steadier, mitigates most of these gripes. Like most compact cameras, the FX55 doesn't include manual exposure controls. Instead Panasonic includes a bevy of scene modes to cover shooting situations that might confuse the camera's auto mode. New to the Panasonic feature list this year is the company's Intelligent Auto mode. It activates the camera's optical image stabilization, Intelligent ISO Control, which automatically boosts the ISO to keep a fast shutter speed and combat hand shake, and Intelligent Scene Selector, which analyzes what's in the frame and chooses what it thinks is the correct scene mode for the given situation. This mode also activates continuous auto focus, so that you don't have to press the shutter button halfway to prefocus and the camera can capture a photo faster than if it needs to focus before snapping a photo. Meanwhile, the camera's Face Detection system can find faces in the frame and use them to set focus and exposure so that the camera won't try to focus or expose for something else in the frame instead of your friends and family. Even going far beyond that, Lumix cameras pursue both the beauty of picture and the ease of operation at the same time to newly include the Intelligent Auto mode. In addition to two of the essential image stabilizing systems, this mode further features three new advanced functions. The Intelligent Scene Selector automatically sets the appropriate scene mode according to the scene you're going to take. It is selected from most frequently used scene modes such as portrait, scenery, macro, night scenery and night portrait. The Face Detection system helps the camera to recognize a human face and focus and set AE. The Quick AF system allows the camera to start focusing on the subject even without pressing a shutter button halfway, to get best result out of a shutter chance by minimizing the AF time. These multicapable functions happen automatically, so you can shoot without the bother of adjusting settings every time conditions change. Lumix and its powerful Intelligent Auto Mode does all the work for you. You can enjoy easy, troublefree shooting in any situation and get the satisfaction that comes with capturing clear, beautiful images. In addition, when using the High Sensitivity mode, the builtin flash reaches as far as 16 m, letting you capture clear images even in dim lighting. For example, Panasonic's Extra Optical Zoom function provides additional magnification, to 5.7x when taking photos with 3megapixel resolution.

Despite the incorporation of 3inch large, multi functional LCD, the DMCFX55 is dramatically slimmer than the predecessor DMCFX50. Resolution significantly decreases in high sensitivity mode. Further, in 3megapixel resolution mode, the Extra Optical Zoom function uses the centre part of the CCD to provide additional magnification, extending the zoom power to 5.7x. Increasing numbers of scene mode is one thing and taking advantage of them is another, and that's why here comes the Intelligent Scene Selector that automatically sets the appropriate scene mode according to the scene you are going to take among the most frequently used scene modes such as Portrait, Scenery, Macro, Night Scenery and Night Portrait. The Face Detection system helps the camera to recognize a human face and focus and set AE. Up to 15 human faces can be recognized simultaneously. The Quick AF system allows the camera to start focusing on the subject even without pressing a shutter button halfway, to get best result out of a shutter chance by minimizing the AF time. These multicapable functions happen automatically, so you can shoot without the bother of adjusting settings every time conditions change. Lumix and its powerful Intelligent Auto Mode do all the work for you. You can enjoy easy, troublefree shooting in any situation and get the satisfaction that comes with capturing clear, beautiful images. This advanced processing engine is also energy efficient. Its low power consumption means you can shoot around 280 images on a single charge, for a full day of shooting fun. The Intelligent LCD of both models detects the light condition and automatically boosts the LCD backlighting by 40% when shooting outdoors in bright sunshine, and boosts signals by pixelmixed readout method when shooting under lowlit situation to secure a clear image in any circumstances.

The High Angle mode, which can be accessed quickly and easily via a dedicated button, makes the LCD screen extremely easy to view when the camera is held high, such as to shoot over a crowd. Panasonic has long focused on making photography more enjoyable, such as by letting people view their images easily on a Viera TV, with its internal SD card slot. Panasonic also offers the DMWSDP1 HDTV Photo Player, which makes it easy to view a slideshow of Lumix photos in 1080i highdefinition quality. Choose the one that best suits the shooting conditions and position of the subject. The result is easy, stressfree shooting and the ability to capture sharply focused photos on a moments notice. Up to 15 human faces can be detected simultaneously. The detection keeps working on the faces even if subjects are moving so that the time for AF is minimized before you click away the shutter. These dates, which can be helpful when making a photo album, can be stamped on photos whether you print them yourself at home or have a photo shop do them. For example, you can quickly and easily take shots of a map or train schedule, and view them when needed. Food, Party, Candle Light, Baby1, Baby2, Pet, Sunset, High sensitivity. HiSpeed Burst, Starry Sky, Fireworks, Beach, Snow, Aerial photo. Intelligent Auto, Playback, Normal Picture, Macro, Motion Picture, Print, Clipboard Playback of favorite pictures, Creating still pictures from a motion picture Category Playback playback and slideshow of pictures in category Slide show duration is adjustable, also manual controllable, image rotation Resizing selectable number of pixels, trimming, protection, aspect conv. DPOF print setting You cannot use SDHC Memory cards on devices that are only compatible with SD Memory cards. When using a SDHC Memory card on another device, be sure to read the operating instructions for that device..

Furthermore, the Venus Engine III advanced imageprocessing engine can record at a sensitivity setting as high as ISO 1250, providing fast camera functioning, and keeps power usage down so you can keep shooting pictures all day. Furthermore, the cameras controls are very intuitive with a logical mode dial, a onetouch function button to quickly access commonly used menu selections, and a slew of scene modes for getting the best possible exposure, without the need to manually adjust all of the camera settings. The 28mm wideangle capability lets you easily capture large groups of people indoors or expansive architectural structures and scenes with dynamic width and rich perspective. Its cool design and light weight make it easy to take with you everywhere you go, just like a fashion accessory, for even more photographic fun. Intelligent Image Stabilizer Image blur is commonly caused by either movement of the camera or movement of the subject. Camera movement is corrected with the MEGA O.I.S. Optical Image Stabilization feature which uses builtin gyrosensors to detect the smallest camera movement and instantaneously shifts a lens element in the opposite direction to compensate, giving you sharp, clear images without deterioration. Motion blur caused when a subject moves as the shot is being taken is minimized with Intelligent ISO Control. This system actually detects whether the subject is moving and automatically adjusts the ISO setting and shutter speed to minimize the motion blur effect while maintaining good exposure. Additionally, a Blur Indicator lets you confirm that the camera is precisely detecting handshake and motion blur separately. High Sensitivity with Intelligent ISO Control The High Sensitivity mode increases the equivalent ISO sensitivity range of the camera to an incredible ISO 16006400 making it possible to take sharp, blurfree shots of active children or pets even in indoor settings with limited light, or without a flash.

The Intelligent ISO uses advanced subjectmotion detection circuitry to sense when your subject is moving and raises the cameras ISO sensitivity and shutter speed settings accordingly. This suppresses motion blur and also makes it easy to shoot scenes with fast moving action. Face Detection for Superb Portraits The Face Detection function can detect up to 15 faces in a scene then automatically adjust the camera settings to make sure faces appear welllit and in focus. This advanced technology will even automatically readjust the settings if the positions of the subjects change while you are framing the shot. The camera will not only help eliminate blurring from handshake or subject movement, but it will also initialize the Face Detection system to detect up to

15 faces and automatically select the focus, exposure and scene modes for the best results. The Intelligent Scene Selector will sense the ambient conditions and automatically select either the Scenery, Portrait, Macro, Night Portrait or Night Scenery mode accordingly. With the camera choosing the settings for you, you'll get beautiful results every time you shoot, no matter what the scene or subject. In fact, the Intelligent Auto Mode automatically begins focusing even before you press the shutter button, so you'll never miss a great shot. SuperFast Shutter Response and Consecutive Shooting The DMCFX55 is fast and responsive thanks to the Venus Engine III processor. The Venus Engine III also enables high ISO to minimize motion blur and take pictures under low lighting without the need for a moodkilling flash. Furthermore, the advanced processor enables fast, and unlimited continuous shooting at a rate of 3 frames per second an incredibly useful feature when shooting sports or other fast paced events. Versatile Auto Focus Options Choose from five focus methods to match the shooting conditions of your subject.

The 5point AF prevents the camera from mistakenly focusing on the area between two subjects in a vertical composition, 3point highspeed AF has the same advantage as the 5point AF but allows the AF system to function much more rapid, 1point highspeed AF further reduces the AF time, 1point AF eliminates screen freeze while maintaining particularly fast AF, and finally Spot AF keys the focus to a small area within the frame for extremely accurate focus on a single subject. This single, easytounderstand mode dial lets you easily switch between shooting, viewing, and printing. Easytouse Scene Modes The DMCFX55 has 20 scene modes to provide the best overall image quality for common shooting situations, such as Portrait, Sports, Scenery, Night Scenery, and more. It is easy to select the best scene mode thanks to the Scene Mode list display and help screen, which shows the description of each mode on the LCD monitor, and animated moving icons make mode selection even easier and more fun. Builtin and Expandable Memory The camera includes 27MB of builtin memory, and the memory capacity can be expanded dramatically with Secure digital SD or Secure Digital High Capacity SDHC memory cards. You can also copy images from a memory card or PC to the builtin memory, and view them on the LCD anytime you like. This highquality, display makes it easy to see your subject, and when shooting outdoors on a sunny day, press the Power LCD button to boost the backlighting by about 40% for easier visibility. The High Angle Mode improves viewability from a low angle, such as when shooting over a crowd. The display also provides many shooting assist features such as guide lines for better image framing and a histogram function to check exposure on the fly.

Extended Battery Life Incorporating the latest lithiumion battery and the Venus Engine processor that consumes less power than previous processors, the DMCFX55 provides impressive battery life so you can take approximately 280 pictures on a charge. Direct Printing Capability Simply connect the DMCFX55 to a PictBridge compatible printer with the included USB cable, engage the direct print feature, and print directly without the need for a computer The direct print feature allows you to select all images or just the images you like best, and even make multiple copies to share with family and friends. Let us know YOUR RECENTLY VIEWED ITEMS Browsing History ON Clear History Not responsible for typographical or illustrative errors. Impressive autofocus implementation. Useful Intelligent Auto mode. Image noise is apparent even at low ISO settings. When it comes to the latter, the 8.1megapixel Panasonic Lumix DMCFX55 shines with stylish design, an easytonavigate menu system, a big, bright 3inch LCD, and an impressive autofocus implementation. Unfortunately, this cam falls short on image quality, especially compared with competing compact models such as the Canon PowerShot SD870 IS or the Sony Cybershot DSCT2. In the end, a generous feature set isnt enough to compensate for muted colors and lowquality images. The camera feels well built and substantial in the hand. Weighing in at about 5.8 ounces with battery and SD card and measuring 2.2 by 3.7 by 1.0 inches HWD, its roughly the same size as the Canon SD870 IS. Its not quite small enough to fit comfortably in a back pocket, and to make room for its 3inch LCD, Panasonic sacrificed the optical viewfinder. While I did miss having it,

especially when shooting in direct sunlight, its becoming increasingly common for manufacturers to drop this feature in favor of a larger display, so its hard to knock the DMCFX55 for this.

On the back of the camera, at the top lefthand corner, is the mode dial for switching between manual, automatic, and movie modes. Next to the LCD is a nifty multidirectional joystick control. Pressing down on it brings up the main menu for access to all the cameras functions. When youre not in the menu system, the joystick can be moved down to switch to playback mode, moved right to configure the flash, left to turn on the timer, and up to change exposure settings. Its a very useful control that makes menu navigation a snap. Last year, Panasonic introduced Intelligent Auto mode in its pointandshoot cameras, a feature that takes the guesswork out of composing and snapping the perfect shot. When this mode is selected, it analyzes the scene and adjusts optical image stabilization, ISO settings, and scene selection accordingly. For example, if youre taking a picture of a person outdoors, the camera will select the appropriate scene mode most likely portrait, and then engage image stabilization, face detection, and autofocus so that by the time you press the shutter button, you should, theoretically, have the perfect settings for that shot. Conveniently, when in Intelligent Auto mode, autofocus is continuous, meaning that you dont have to hold the shutter button down halfway in order to use it. For the most part, Intelligent Auto mode worked well on my tests. There were a few instances, however, in which the camera selected the wrong scene. In addition, face detection in this mode wasnt always 100 percent effective. Still, novice users who dont like fiddling with multiple settings will enjoy the sheer ease of use. In shots of a landscape scene that included a bright blue sky, the sky appeared washed out. In images of our still life scene in the lab, colors also appeared dull and muted, lacking that vivid look I would expect from a camera at this price point. Also, even at low ISO settings, images showed noise, and at higher than 400 ISO, noise became distracting.
