W. 5.0 out of 5 stars Right away, the main differences are Larger size, partly due to the use of 4 AA batteries. I bought the Sony Super Quick BCG34HC charger, which also comes with 4 2300 NiMH batteries. The batteries lasted about a week and a half of heavy picture taking with the the flash on and off, along with the display on. For and extra twenty bucks on Amazon, its worth it. The LCD is slightly larger. In addition, the LCD also flips out and around. You can easily frame and take pictures of you and a friend without having to use the self timer. The manual features are far superior to the Elph series.

The A95 Powershot allows manual focusing. And aperture settings. This is a far improvement and gives you a little more creative control over images. The camera still has a complete auto setting should you just want to use it as a simple point and shoot. The lenses on the Powershot A95 are

interchangable. You can buy telephoto lenses for it though you must also purchase an adapter for any interchangeable lenses for this camera I think the idea is cool, but the lens and the adapter are NOT cheap. If you bought the camera and the lenses and the adapter, you could spend an extra fifty or hundred dollars and then just get the digital rebel which would allow total creative control with fully manual settings. Again, a fun idea, but maybe try to find the lenses used at a cheaper price. The camera turns on quickly like the Elph, and has the same small shutter lag. Its not bad, but in low light it takes extra time to focus. The only qualm I really have with this camera is the LCD screen is WAY too bright. Images look washed out and have inaccurate colors on the LCD screen then when you get them on the computer and print them out. And the worst part about it is, you cant fix it. There is NO way to adjust the brightness level of the LCD screen. On the S400 Elph, you could adjust the brightness level of the LCD screen, on the A95 you cannot. I like seeing my images how they will look when I am changing controls so I get a correct picture the first time the whole point of a digital camera! I think this is an oversight on Canons part and the brightness option should be included on future models. Basically, what it comes down to is, if you want a camera just for keeping in your purse and using it at parties and simple settings and the like, I would always recommend the Canon Digital Elph Series. Theyre small and have incredible image quality. However, if you want more creative control and the ability to use some manual controls, by all means buy this camera.

It can be easily used as a point and shoot, but it really is so much more. All in all, Im very happy with the camera and all of the scene modes and extra controls. Its a nice step up from the camera I was using. First I narrowed down my choice to Canon based on reviews on digital camera sites I spent 2 weeks reading reviews until my eyes felt burned out!. I didnt like the image quality of Kodak, and the Fuji cameras had excellent images but not all the features I wanted like unlimited continuous shooting. After reading tons of reviews I heard the Canon SD models sometimes have an LCD problem and you are also paying a lot more for their slightly more compact size. If you dont care if it is super small, the A series is actually a much better buy. It is 5 MP and since I do graphic design I do use that resolution, although you wont need it unless you do a lot of zooming in and cropping or enlarging photos. The 3x optical zoom is excellent too. It works well in low light conditions or bright outdoors. It really captures motion well, I have taken lots of horse movement shots and the camera has a setting for fast moving objects that can freeze the action without blurring. The camera feels quality and not fragile or cheap. I love this camera it takes gorgeous photos and has options such as continuous shooting great for action sequences like a horse going over a jump! It has an optical plus LCD viewfinder, and you can flip the LCD out or rotate it around in case of glare. It takes unlimited movies too which are good quality not as good as camcorder but one of the best in a camera I have seen. I have not even explored all the options yet, it has a lot of advanced features so I can grow with it. Also it takes regular AA batteries not a proprietary battery so if you run out its easy to get replacements at the store. I use rechargeable NiMH AAs.

Some cameras use special batteries that are expensive to replace when they dont hold a charge like cordless phone and laptop batteries. I am extremely happy with this camera.
