The text of this Manual is offered as a general guide for the use of industry and of consulting engineers in designing systems. Judgment is required for application to specific installation, and Carrier is not responsible for any uses made of this text. To perform this function, equipment of the proper capacity must be installed and controlled throughout the year.

The equipment capacity is determined by the Generally, it is impossible to measure either the actual peak or the partial load in any given space; these loads must be estimated. It is for this purpose that the data contained in Part 1 has been compiled. The heat gain or loss is the amount of heat instantaneously coming into or going out of the space. It furnishes the procedure for establishing the criteria to fulfill the conditions required by a given project. The basis of the data and its use, with examples, are included in each chapter with the tables and charts; also an explanation of how each of the heat gains and the loads manifest themselves. The following physical aspects must be considered 1. Attic space unvented or vented, gravity or forced ventilation. Surrounding spaces conditioned or unconditioned temperature of nonconditioned adjacent spaces, such as furnace or boiler room, and kitchens. Floor on ground, crawl space, basement. 8. Type of shading device. Dimensions of reveals and overhangs. 9. Horsepower of machinery, ventilated or not. 11.
