Super high amount of views. 1 sold, 0 available.

More Super high amount of views. 1 sold, 0 available. You are the light of the world. The Parts Manual has exploded views of every assembly on the Skid Steer, with corresponding descriptions and OEM part numbers, which can be critical when ordering parts. Imagine your PTO in a parts washer with no view of how the pieces should fit together, or with no list detailing if you have all the parts. You may already have the service manual to give you instructions on disassembly and reassembly. This manual, specific to the Case model 85XT, will be the perfect visual companion to the written instructions in the service manual. The Parts Manual for your Case will help you work smarter and faster. Get the right parts the first time. Caution Please pay close attention to the title of the manual and the title printed on the cover of the Manual in all cases. If the description says Chassis Only, then the engine is not included. If the description says, Loader Only, Injection Pump Only, or any other component, then there are no other items besides what is listed included in the manual. Please call or chat if you have questions or need assistance. May fit other models as well. The description above is designed to give you an indication of the purpose of the manual. This costeffective quality manual is 100% complete and intact as should be without any missing pages. It is the same factory shop manual used by dealers that guaranteed to be fully functional to save your precious time. Each section covers a specific component or system and, in addition to the standard service procedures, includes disassembling, inspecting, and assembling instructions. A table of contents is placed at the beginning of each section. Pages are easily found by category, and each page is expandable for great detail. It is in the crossplatform PDF document format so that it works like a charm on all kinds of devices. You do not need to be skilled with a computer to use the manual. Pressurized to 34.5 kpa 5 psi, with a 3.5 kpa 0.5 psi vacuum breaker. A 100 mesh suction screen is located near the bottom of the reservoir to supply filtered oil to the hydraulic gear pump. Hydraulic gear pump Supplies flow to charge the hydrostatic tandem pump assembly and operate the hydraulic system. Constant pressure priority valve Integrated with the

hydraulic gear pump to provide priority oil flow to charge the hydrostatic tandem pump assembly, with remaining flow supplying the hydraulic system. Loader control valve Is a three spool valve controlling the loader, bucket and auxiliary circuits. The main relief valve is also part of the valve assembly.

Bucket cylinders Used to control the movement of the bucket with cushioning employed at the rod end of the cylinder. Loader lift cylinders Used to raise and lower the loader frame with cushioning employed at the base end of the cylinder. Auxiliary disconnects Located on the left loader frame for the purpose of auxiliary hydraulic power to attachments. Return filter Provides 2 Micron filtration for return oil from the hydraulic system. Charge filter Filters charge oil prior to entering the hydrostatic tandem pump assembly. Provides 2 Micron filtration. Oil cooler Cools hydraulic system return oil and hydrostatic drains. Self Leveling Valve Used to maintain a level bucket position as the loader frame is raised. Reservoir The hydraulic system begins at the reservoir located in the left rear frame. The reservoir has a capacity of 66.2 litres 17.5 U.S. gallons and is pressurized to 34.5 kPa 5 psi. Pressure is controlled by the relief in the reservoir cap. A vacuum breaker is also employed in the cap to open at 3.5 kPa, 0.5 psi allowing air to enter the reservoir. A 100 mesh strainer is located in the outlet port of the reservoir to assure that contamination larger than 150 Microns does not enter the inlet of the hydraulic gear pump. The strainer can be removed for cleaning. Remaining pump flow is diverted to the equipment port for use in the hydraulic system, for loader, bucket, auxiliary and power beyond circuits. Return oil from the hydraulic system passes through the filter and cooler before returning to the reservoir. The hydraulic pump is mounted to and driven by hydrostatic tandem pump. The hydrostatic tandem pump is directly coupled to the engine and driven from the flywheel end.
