Latin I Stage I Calendar

Tuesday, September 3rd MAGISTRA= Teacher
 Introductory Presentation: What is Classics?
Labor Domi (homework): Bring in Course Materials

Wednesday, September 4th SALVE= Hello
 1. Questions/ Discussions (Questions for Students)
 2. Distribute Textbooks
Labor Domi (homework): Cover Textbook by Friday 9/6/13. You can use a book sock OR cover your book with paper (use a large paper bag). Here are [Online Directions](#)

Thursday, September 5th Vale= Goodbye
 1. Translate model sentences p. 1-18 on page 2 of your calendar
 2. If time, read pages 10-11 and answer questions about Caecilius in your calendar
Labor Domi (homework): Cover Textbook by Friday 9/6/13. You can use a book sock OR cover your book with paper (use a large paper bag). Here are [Online Directions](#)

Friday, September 6th Tempus Fugit= Time flees/runs away
 1. Complete and correct model sentences
 2. Partner Activity: Syllabus FAQs
Labor Domi (homework): Have parent/guardian read and sign syllabus card by 9/13

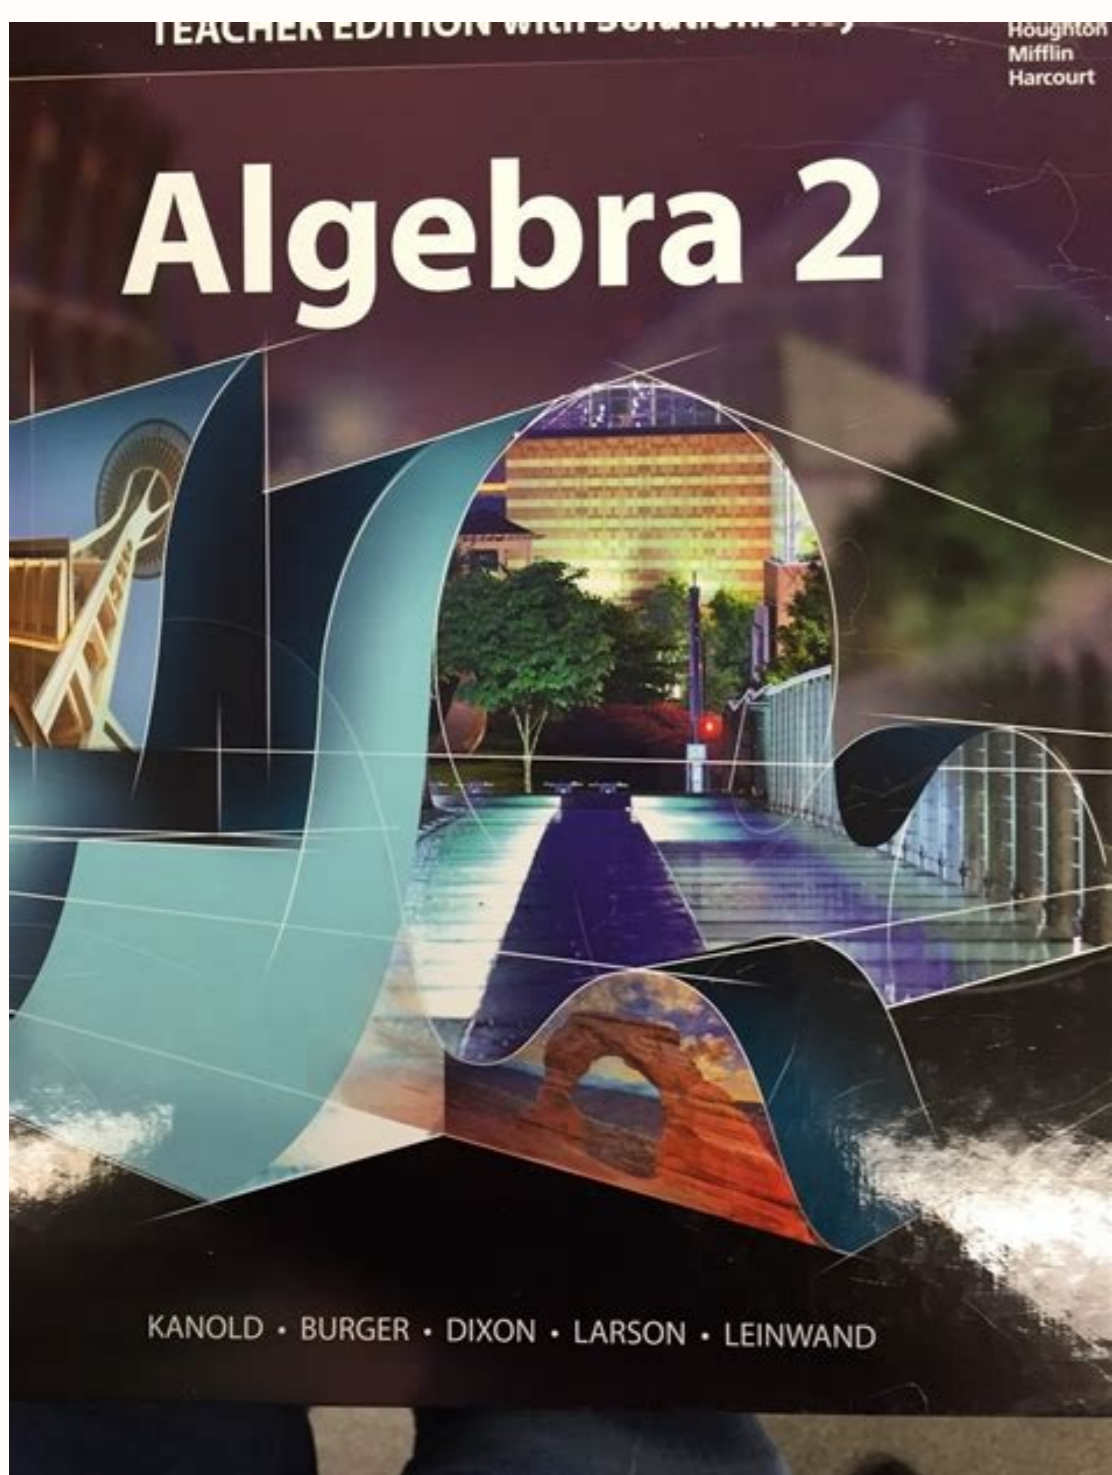

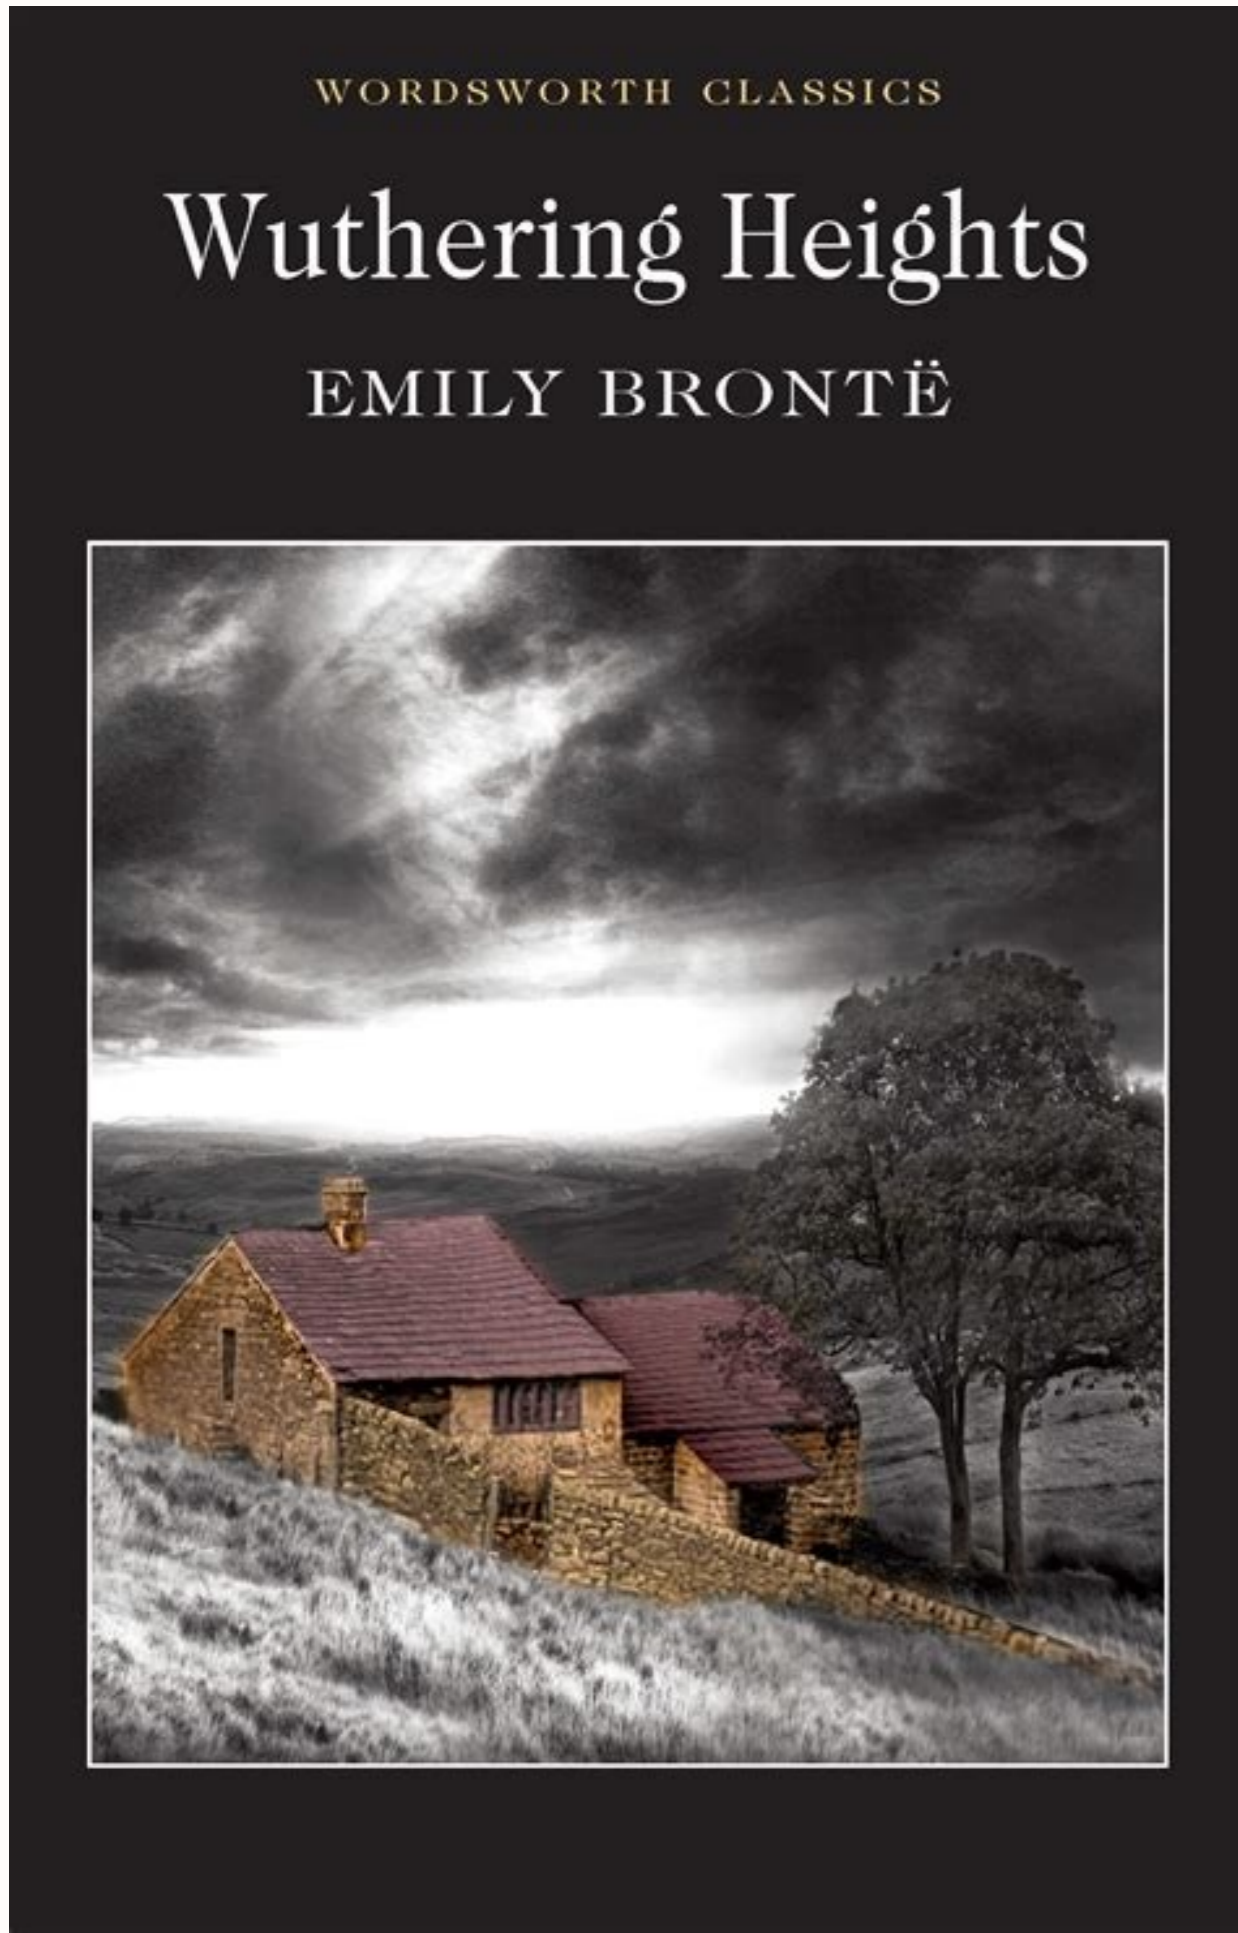

Monday, September 9th In Computer Lab 137
 1. Orientation to online tools: Blackboard, GoogleDocs and Quialet, VoiceThread
 2. Practice Vocabulary for Stage 1 & Stage 2 on the Cambridge Website
Labor Domi (homework): Read pages 12-15 about Houses and answer questions on page 6 in your calendar

Tuesday, September 10th In Computer Lab 137
 1. Check page 6 in your calendar online
 2. Voice Thread: House of Caecilius
 3. Study for Stage 1 Vocabulary Quiz using Quialet
Labor Domi (homework): Read pages 10-12 and answer questions about Caecilius and Metella on page 5 in your calendar

Wednesday, September 11th SPQR= S P Q R
 1. Check page 5 in your calendar & discuss Caecilius and Metella
 2. Translate Carmentis Together from textbook page 7 into your notebook
 3. Make a Vocabulary Study Guide for words on your VINCO Card on page 4 in your calendar
Labor Domi (homework): Study for Stage 1 Vocabulary Quiz using Quialet and Cambridge Website

Thursday, September 12th VINCO= I win
 1. Complete the Derivative Probatio on page 3 in your calendar
 2. VINCO Vocabulary Game on page 4 in your calendar
Labor Domi (homework): Study for Stage 1 Vocabulary Quiz using Quialet and Cambridge Website; Turn in signed syllabus card by tomorrow

Friday, September 13th BONA FORTUNA= Good Luck
 1. Turn in signed syllabus
 2. Vocabulary Quiz for Stage 1 (must know all the words and characters on the VINCO card)
Labor Domi (homework): nihil

JULES VERNE
JOURNEY TO THE CENTRE
OF THE EARTH

A new translation by William Butcher

Copyrighted Material

During this period Dirk Hünninger independently wrote MediaWiki2LaTeX, which also compiles Wikipedia books in PDF format. A Wikipedia Book is an organized collection of Wikipedia articles. For details of how to restore a book after deletion, see: Wikipedia:Books/archive This page has been closed down by community consensus, and is retained only for historical reference. If you wish to restart discussion on the status of this page, seek community input at a forum such as the village pump. Overview Each book has its own Wikipedia page, which contains a Contents list of the articles included in it together with formatting metadata such as Chapter headings. The new renderer is planned to provide limited initial functionality, with incremental improvements over time. As of April 2019 an alpha release of the core Collector service has yet to become usable. May 24, 2021: Proposal 1, there was consensus to deprecate the entirety of the Book. You get to the talk page by clicking the "Talk" tab at the top of the article. It has since been improved and offered by the Wikimedia Foundation (WMF) as an online service. Searching for books You can look for books either by browsing the book categories or by searching for a title or topic. On 18 June 2021, consensus was reached to delete the book namespace and all pages within it, although individual books will be restored upon request. The Wikimedia Foundation turned off the book rendering service on all Wikimedia wikis in October 2017. After a few moments, Wikipedia will open a new page letting you know that your new document has been generated. Click the Download the file link to view the PDF directly in your browser, or right-click and select Save as to save it to your computer as normal. On July 13, 2021 the namespace was deleted through phabricator ticket T285766. Category:User namespace book pages lists all current user books maintained on user pages. Here's how to turn Wikipedia articles into a PDF for offline reading or print as a paper book. Turn a Wikipedia Article Into a PDF Would you like to save a favorite Wikipedia article as a PDF to read offline or share with your friends? Sure, you could just print an article as PDF directly from your browser, but this will not turn out very nice looking. However, we can use new tools built into Wikipedia to automatically make a PDF copy of an article that looks more like a traditional book rather than just a web printout. To do this, click the Print/export link on the left sidebar in Wikipedia when you're on an article you want to save. The Book Creator tool automates much of the book design work, although experienced editors can still code up the book design by hand. A second attempt, named Proton, also failed at book rendering but succeeded Electron for article rendering in 2019. A set of proposals to look at the future of the Book namespace were started on May, 15 2021. The best way to do this is by clicking the "New section" tab at the top of the page. This will open a page where you can rearrange, sort, or remove articles from your eBook. Simply drag-and-drop the articles to get them into the order you want. On 3 August 2021, all books were deleted. As of August 2020 the Book Creator design tool, MediaWiki2LaTeX softcopy rendering service and PediaPress print service remain available. Since then, Wikipedia books have only been available from third-party providers. On 24 May 2021, the Book namespace was formally deprecated. There are third party services for rendering electronically in PDF format, or ordering as a printed book. This will show several options for ways to use this article. Click Download as PDF to have Wikipedia automatically generate a PDF copy of this article. 2017 ff: Candidate replacements A candidate replacement, called Electron, was based on the open-source Chrome HTML-to-PDF rendering engine but proved unsuitable for books, although it replaced the OCG for the PDF download of single articles. For information and help on Wikipedia books in general, see Help:Books (general tips) and WikiProject Wikipedia:Books (questions and assistance). As a result of then-anticipated future solutions, template transclusions were not removed from articles. This will automatically insert your IP address (a number representing your internet connection)username and a link to your personal talk page, along with the time you saved the page. Bookshelf Browse the book categories: 51,693 user-maintained books Search for books: Featured and good topics Featured topics and Good topics are collections of some of Wikipedia's best articles. If you choose to download a PDF, you'll have to wait a few moments while the entire book is rendered and combined. Once you're finished, you can select to download your eBook as a PDF or ODT formatted document, or order a printed copy of your Wikipedia eBook from PediaPress. Proposal 3, there was consensus to stop the creation of books in the book namespace with the book creator. No matter how you need to use Wikipedia, the new PDF and eBook features make it easy to remix and take Wikipedia with you. We found the eBook creator very easy to use, and were pleased at how nice the finished PDFs turned out. Give it a try and make personalized eBooks with the info you need, for fun or study! More Info About the Wikipedia Book Creator PediaPress Former namespace and feature This page is about Wikipedia books - books built from Wikipedia articles. Due to Wikipedia:Templates for discussion/Log/2021 April 7#Template:Wikipedia book, Template:Wikipedia books and related templates were deleted in April 2021 and all of their transclusions were removed, June 18, 2021 Proposal 4, there was consensus to no longer support WikiProject assessment of the book namespace. It was last substantively updated May 2021. Proposal 2, there was consensus to disable indexing of the book namespace to hide it from searches was reached. The namespace and its transclusions were retained in the hope that the WMF would come up with a solution. See Suppress rendering of Template:Wikipedia books for more information. You can create a book as a sub-page in your own user space, or as a community book in the Book: namespace. Search tool The following code: { {#tag:inputbox| type=fulltext prefix=Book: width=40 break=no searchbuttonlabel=Search } } creates a search box which will return a list of book titles. You'll be returned to the Wikipedia article you were at previously, but this time, you'll have a new Book creator bar on the top of the page. Click Add this page to your book to add the page you're on. Here's our PDF in Adobe Reader inside our browser. Wikipedia generates very nice looking PDFs that will be nice to read on your computer, eBook reader, or even to print out and share. But Wikipedia does not print books or handle ordering, as that costs money. Proposal 5, there was consensus to delete all books within the book namespace, with the option to move them to userspace. If you create an account, your username will become your signature and you will be able to tell you want, you can customize how it looks. If the tab shows up in red, it just means no one has commented yet; feel free to start a discussion. Next >> Full manual Retrieved from " Editors in discussion valued the user experience of Wikipedia readers over the business prospects of PediaPress and felt that the template and sidebar link were no longer justifiable. Once completed, a book can be uploaded to the independent company PediaPress, where print-on-demand copies can be ordered. You may be looking for Help:Books. WikiProject Wikipedia:Books, WikiProject Books, Wikipedia:Notability (books), Print Wikipedia, Wikibooks, Bibliography of Wikipedia or User:Tompw/bookshelf. On 13 July 2021, the Book namespace was uninstalled from the English Wikipedia. Once you've added all the pages you want, click the Show book link on the top. It is being developed as a closed source project. When you start a new discussion topic, put it at the bottom of the talk page. Some topics may have a dedicated book linked in the upper-left corners of the topic boxes. You can also preview how your book would look as a printed book. The book previews look very nice, so if you need a printed book copy, this looks like a very good option. An agreement was reached with PediaPress, who built their own renderer and publishing website, where a user could upload a Wikipedia book and either download a PDF softcopy for free or order Print on demand copies. The Offline Content Generator (OCG) back-end service, which rendered the book in the chosen format and made it available for download. You can organize it even more with chapter dividers. Click Create chapter at the top of the box. However the Wikimedia Foundation were reluctant to adopt it because they could not support the Haskell programming language in which it is written. The Wikipedia eBooks turn out quite nicely, and include tables, many images, and links from the original article, all laid out in a nice, book-style format. You can now read and share your eBook from your computer, print it out, or transfer it to an eReader to read your Wikipedia book on the go. In April 2018 PediaPress stepped forward to try and develop a viable replacement PDF book renderer called Collector, based on their previous experience with their own in-house renderer. If you are responding to someone else's remarks, put your comment below theirs. PediaPress later withdrew their free softcopy service. This allows you to enter a new section heading and your comments. Now just enter a name for the chapter in the popup, and click OK to add it to your book. Books may also be retrieved by other independent publishing tools such as MediaWiki2LaTeX. Create a Wikipedia Book If you need several different articles from Wikipedia for offline use, it might be better to create a Wikipedia eBook. This makes it easy to get all of the article you need together, organized and formatted like a traditional book. To do this, click Create a book under Print/export on the left sidebar in Wikipedia. You can do this by clicking on the "edit" link to the right of that section's heading and then scrolling down. 2017: On-wiki PDF withdrawal Eventually the OCG service became outdated and unworkable. Whether you prefer reading on your computer, eBook Reader, or on paper, sometimes it can be nice to have your research together in a book format. The Bookshelf The Bookshelf is a simple tool which combines the above options with a few statistics, enabling you to browse, search and view the Wikipedia Books created to date. As the Book Creator no longer generates copies of Wikipedia books, its primary working feature directs users to order printed Wikipedia books from PediaPress, a third-party company which has a longstanding agreement with the WMF. All books were moved to subpages of Wikipedia:Books/archive at the end of June where they remained for a month to allow users to keep books in userspace and allow for refunds after namespace deletion. 2021: Deletion of Book namespace ShortcutWP:BOOKSDEP As a result of a village pump proposal, article and template transclusions to Wikipedia books are deprecated. You can place a copy anywhere by clicking the Edit tab above and copy-pasting the code from this page. History 2009: Rollout Wikipedia Books was first rolled out in 2009. Drag and drop the chapter markers as you want to organize your book. Don't forget to add a Title and Subtitle as well. The book is compiled afresh each time it is retrieved by the service, so that a new upload will always reflect the latest versions of the articles. It comprised two main parts: The Book Creator user interface, for designing the book and for selecting an electronic format to render an individual copy as an eBook. Always sign your comments by typing ~~~~ or clicking the button. This will open the Book creator page; click Start book creator to get started. This new Book creator bar will follow you on Wikipedia now, so you can visit any page and add it to your eBook. You can quickly add related articles in articles you're adding, as you'll see a new Add linked wiki page to your book tooltip when you hover over links in articles. Click it, and that page will be added to your eBook without having to visit the page. 2019: Links hidden in articles and sidebar In December 2019 English Wikipedia suppressed the rendering capability of Template:Wikipedia books (related =Template:Book bar & Template:Books-inline) and removed the Book Creator from the sidebar after a community discussion about effectiveness. The WMF are also unable to support closed-source code owned by third parties. Book categories Wikipedia books are automatically categorised by location. It used to be possible to build an e-book on Wikipedia for immediate download, but this service is no longer available.
