Утилита с простым и понятным интерфейсом на русском языке позволяет объединять таблицы, графики, карты и диаграммы. Имеет широкий набор инструментов для работы и внесения корректировок. Применение и особенности программы При помощи программы можно хранить, собирать и анализировать графические данные. Географические данные включают в себя 4 встроенных компонента: пространственные отношения, характеристики и свойства, местоположение, время. Утилита применяется в нефтегазовой и транспортной индустрии, образовании, науке, экологии и промышленности, землепользовании и других сферах. Пользователи могут устанавливать географические связи для всех поддерживаемых форматов. В процессе использования можно работать с САПР данными, картографической информацией, снимками. Возможности программы В панели управления есть меню формы просмотра, где пользователи могут просматривать данные в виде карт с легендой и аннотацией. Присутствует возможность внесения корректировок в масштаб. Все выполненные изменения автоматически сохраняются в документе. Для поиска данных на карте, воспользуйтесь функцией табличная форма. Сведения можно импортировать из форматов Excel, dBase, Lotus 1-2-3 и других. Для вывода информации в виде графики, используйте функцию диаграммы. Если в процессе использования возникают вопросы, можно пройти краткое обучение и почитать справочник. Преимущества программы Инструменты графической компоновки поддерживают различные форматы вывода; встроенные «мастера» облегчают выполнения ряда функций; утилита имеет широкий набор инструментов для работы; для поиска данных на карте, воспользуйтесь функцией табличная форма; полная совместимость со всеми версиями Windows. 187 Мб (скачиваний: 4686) [y]. Thought I'd post my 'final conclusion' after a few days of searching for the right answer and coming across numerous, cumbersome processes to get AV3x on to 64 bit Windows 7. I stumbled upon a pretty obscure but seemingly straight forward answer, somewhere... You can simply download a 32 bit 'installshield engine' - setup32.exe - and use that to install the AV3x files from original installation media - instead of the 16 bit 'setup.exe' that normally comes with ArcView 3x... Put setup32.exe in the same folder as the ArcView 3x installation stuff, double click, and it installs normally. You might have to run that program in Windows XP compatibility mode... I had used a version of AV3x that I copied from an XP installation, but ran into a few problems here and there. For example, the projection utility wouldn't work. Trying to fix that I got fed up with all the change the registry stuff, copy this, copy that - so I tried this setup32.exe way. Seems to work so far, projection utility works, though there may be some issues with that that I haven't figured out yet. Everything else I've tried works, though granted, I haven't done a whole lot yet... edit: Here's a link to the page I found that talks about using Installshield 32 bit vs. 16 bit, which includes a link to "setup32.exe", scroll down to "Installshield3 shortcut" at that page; Share this article: With so many GIS shops hanging on to legacy ArcView 3.x project files (.apr), having a running ArcView 3.x version in still a necessity for some. Others still find preferable to ArcGIS. Installing ArcView 3.x straight from its original installation CD unfortunately won't work. The installer is 16-bit so trying to install ArcView's setup.exe using the computability tab found on Windows 7 is not an option. The steps below are what worked for me when I needed to install ArcView 3.3 on a Windows 7 operating system and I found them to be the simplest way to install a running version of ArcView 3.3: Installing ArcView 3.3 on Windows 7 - Solution 1 This first solution requires access to a Windows machine running Windows XP. Even though it's deprecated, ArcView 3.3 is still a commercial GIS software package so only transfer ArcView 3.3 installations that you are licensed for. Copy over the Required Files From the XP machine copy C:\ESRI and paste in the same named folder on Windows 7 From the XP machine copy the files in C:\Program Files\Common Files\ESRI and paste into your Windows 7 machine in the following directory: C:\Program Files (x86)\Common Files\ESRI On the XP machine, copy the ESRI fonts from c:\windows\fonts. On the Windows 7 machine, install those fonts. Update: these additional instructions have been supplied by James Cokinos from CGG on making sure that the final file, match.dll is copied over: Once these files are copied over there will still be one missing file you have to get before you can run the .exe from the BIN32 folder. One .dll (dynamic link library) called match.dll needs to be copied over: Copy and paste this .dll from the Windows XP machine into the following folder -> C:\ESRI\AV_GIS\30\ARCVIEW\BIN32 Testing the ArcView 3.3 Installation Once all the necessary files have been copied (and the ESRI fonts installed), you are ready to test your ArcView 3.3 installation. Navigate to C:\ESRI\AV_GIS\30\ARCVIEW\BIN32\arcview.exe and double-click to launch the application. To have Windows 7 automatically open .apr files using ArcView 3.3, double-click on any .apr file. In the dialogue box that appears, click the browse button and navigate to C:\ESRI\AV_GIS\30\ARCVIEW\BIN32 and select arcview.exe. In the Open with dialogue box, make sure the "Always use the selected program to open this kind of file" is checked and hit the OK button. Now Arcview.exe is associated with .apr files and double-clicking this file type will automatically launch ArcView 3.3 in the future. Second Method for Installing ArcView 3.x on Windows Vista or Windows 7 For a 64-bit Windows OS you have two options: 1) Copy all of the files, and registry settings, manually; or 2) Create your own 32-bit or 64-bit installer. I chose the second option and created my own 32-bit installer using Microsoft Visual Studio. Here is what I did - NOTE: You can use these instructions for manually copying the files too. %windir% means the Windows directory, usually C:\WINDOWS\ 1) Start with a clean install of a 32-bit Windows OS (I used XP Pro). I also installed MS Visual Studio. 2) Create and save a listing of all files in the directory: %windir%\system32\3) Install ArcView 3.x and any extensions you want. For these instructions, I also installed Network Analyst and Database Access. Also add the extensions you want which do not have their own installer, such as Compiled Table Tools. 5) If you want ArcView to already be registered, launch ArcView and register it now. 6) Find all of the files the installers have added. If you did not install the same extensions I installed, then some of these files I list below may not be installed, or additional files may be installed. Just be methodical and careful when looking for which files were added. 6a) Because you started with a clean OS install, with no other ESRI apps, you can just grab everything in: C:\ESRI\AV_GIS\30\ARCVIEW\BIN32 Grab the ArcView 3.x fonts installed in %windir%\Fonts: esri_1.ttf esri_155.ttf esri_2.ttf esri_3.ttf esri_4.ttf esri_5.ttf esri_6.ttf esri_7.ttf esri_8.ttf esri_9.ttf esri_10.ttf Also grab these files, if they were installed: C:\Program Files\Common Files\Microsoft Shared\DAO\dao350.dll 6d) There may also be some files installed in the %windir%\system32\ directory. Use the list you created in step 2 (above) to find the new files which were installed with ArcView. NOTE: You may not need to install/copy all of these files. The rule I used for all files was only install a file if it does not already exist on the target system. 7) Grab the registry settings the installers have added. Grab everything in: "HKEY_LOCAL_MACHINE\SOFTWARE\ESRI" And also grab these keys: HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\App Paths\ArcView.exe HKEY_LOCAL_MACHINE\SOFTWARE\Classes\apr HKEY_LOCAL_MACHINE\SOFTWARE\Classes\ArcView Project\shell\open\command Copy the files and registry settings to the target machine. 8a) Copy the files in these directories to the same directory on the target machine: C:\ESRI\AV_GIS\30\ARCVIEW\BIN32 For these directories, copy the files from C:\Program Files\Common Files\Microsoft Shared\DAO to C:\Program Files (x86)\Common Files\Microsoft Shared\DAO, from %windir%\system32 to %windir%\SysWOW64 8c) Register these files, if they were copied, using "%windir%\system32\regsvr32". For example: c:\windows\system32\regsvr32 C:\Program Files (x86)\Common Files\ESRI\Shape20.dll %windir%\SysWOW64\comcat.dll %windir%\SysWOW64\comcat232.ocx %windir%\SysWOW64\comcat32.ocx %windir%\SysWOW64\comcat32.ocx %windir%\SysWOW64\crystal32.ocx %windir%\SysWOW64\mf40.dll %windir%\SysWOW64\mf40.dll %windir%\SysWOW64\mscomctl2.ocx %windir%\SysWOW64\mscomctl2.ocx %windir%\SysWOW64\msvbvm50.dll %windir%\SysWOW64\msvbvm60.dll %windir%\SysWOW64\msvbvm60.dll %windir%\SysWOW64\tabctl32.ocx %windir%\SysWOW64\tabctl32.ocx %windir%\SysWOW64\tbtree32.ocx %windir%\SysWOW64\tbtree32.ocx If you did not install, there may be other files which need to be registered. Try the extension and if it does not work, look for DLL or OCX files that are specific to that extension and register the files. 8d) You cannot just copy font files to the fonts folder on the target machine. Instead, XP navigate to the Fonts directory on the target machine and from the file browser "File" menu choose "Install New Font...". There should be a similar method in Vista and 7. 8e) To manually copy a registry key, find the key in Regedit. Right-click on the key and select Export to save the keys/values to a text file. 9) Copy the file to the target machine and right-click on the file and select Merge. IMPORTANT: You have to edit this registry key before Merging it on the target machine. Edit the file you Exported in any text editor, change HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\App Paths\ArcView.exe to HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Microsoft\Windows\CurrentVersion\App Paths\ArcView.exe Good luck! Related Post: ArcView Free Download Latest Version setup for Windows. It is full offline installer standalone setup of ArcView for Windows 32 bit 64 bit PC. ArcView Overview: ArcView is an application that can be used for building maps after deep analysis and with up-to-date data. Maps build through ArcView can be used for making decisions. It has been developed by Esri and is now known as ArcGIS for Desktop. There are lots of tools available for spatial analysis and these tools will permit you to transform your data into actionable information. ArcView has a support for a wide range of formats. With almost 70 plus formats you can easily integrate different types of data for analysis and visualization. The workflow can be automated with some advanced tools. It has got a large library of symbols and has some predefined templates plus a useful wizard which will assist you to build maps of highest quality. You can also which is great application. Geocoding is also enabled that can be performed for simple data analysis as well as for business management. ArcView is a useful product in which you can access advanced imagery. Features of ArcView: Below are some noticeable features which you'll experience after ArcView free download. Can build detailed models. Can perform deep analysis. Lots of tools for spatial analysis. Supports a wide range of formats. Automated workflow. Got huge library of symbols. Got predefined templates. A useful wizard for building maps. Can access advanced imagery. ArcView Technical Setup Details Software Full Name: ArcGIS 10.1 Setup File Name: ArcGIS_10.1.ISO Full Setup Size: 4.3 GB Setup Type: Offline Installer / Full Standalone Setup Compatibility Architecture: 32 Bit (x86) / 64 Bit (x64) Latest Version Release Added On: 16th Feb 2015 Developers: ESRI System Requirements For ArcView Before you start ArcView free download, make sure your PC meets minimum system requirements. Operating System: Windows XP/Vista/7/8 Memory (RAM): 256MB of RAM required. Hard Disk Space: 700MB of free space required. Processor: Intel Pentium 4 or later. Click on below button to start ArcView Free Download. This is complete offline installer and standalone setup for ArcView. This would be compatible with both 32 bit and 64 bit windows. ArcView Stream Model Digitizing Extension Оцифровка (векторизация), процесс перевода растровых данных в векторную форму) - процесс умозрительный, иудный и значительное количество времени отнимающий. Для облегчения подобного рода работ департаментом природных ресурсов штата Миннесота (США) (был разработан Stream Digitizing Extension for ArcView, позволяющий быстро оцифровывать объекты на экране. Можно просто проводить линию по экрану без расстановки вершин (вертексов). Stream Digitizing Extension расставит их самостоятельно с тем интервалом, который вы задаете в окне настройки. Отличительной чертой расширения является то, что оно позволяет строить топологически корректную структуру, пристыковывая вновь создаваемый объект к ранее существующему. Позволяет строить линии и полигоны. Скачать расширение можно (20 килобайт). EPPL7 Image Support С помощью этого расширения можно просматривать в ArcView 3.X растровые изображения пакета обработки растровых данных EPPL7, разработанный Информационным центром по землеустройству (Land Management Information Center - LMIC) штата Миннесота (). Скачать расширение можно (30 килобайт). Необходимо скопировать файл eppl7.avx в директорию Ext32 , а eppl2av.dll - в директорию Bin32 . Snap2other Стандартные средства ArcView 3.X предоставляют возможность осуществлять объектную привязку только внутри одной активной редактируемой темы (Theme - Properties - Editing - Snapping). Расширение Snap2other, разработанное Джоном Грейсоном (John Grayson) и доступное на сайте ESRI (), позволяет частично обойти эту проблему. С помощью этого расширения можно привязать объекты из одной темы к объектам из другой темы. Причём привязывать друг к другу можно объекты разного характера локализации (точки к линиям, линии к полигонам, полигоны к точкам и т.д.). Возможно также изменять snap tolerance. Скачать расширение можно (3 килобайт). COS Copy Move Rotate Mirror Стандартные средства ArcView 3.X позволяют производить только простейшие манипуляции с объектами, такие, как, например, перемещение и изменение масштаба. Расширение COS.Copy Move Rotate Mirror, доступное на сайте департамента сельского хозяйства США (позволяет производить дополнительные операции - поворот и зеркальное отображение. Возможны свободные (произвольные, ручные) операции, а также поворот на заданный угол, перемещение на заданное расстояние и т.п. Скачать расширение и текстовое описание можно (32 килобайта).
